Insider Tips To Make Your Business Run Faster, Easier And More Profitably

Happy Summer

As the sunshine gets brighter, we want to wish everyone a joyful and refreshing summer season!

Whether you're planning a getaway or simply enjoying the warm weather, this is also a great time to revisit those projects that have been waiting in the wings.

Summer offers the perfect opportunity to clear out the clutter—both in your inbox and on your to-do list. Let's take advantage of the season's energy to wrap up lingering tasks, kick off new initiatives, and set ourselves up for a strong second half of the year. Here's to progress, productivity, and plenty of sunshine!

OUR MISSION:

To protect businesses from the low-life thieves who work outside the law who hold us ransom and take our hard earned money

7 QUESTIONS

You Should Be Asking Your IT Provider Every Quarter *(But Probably Aren't)*

1. Are There Any Vulnerabilities We Need To Address Right Now?

This isn't just about checking boxes.

Ask:

- Is our antivirus up-to-date? Are there unpatched systems?
- Have we had any near misses or red flags lately?

2. What's The Status Of Our Backups? And Have You Tested Them Lately?

Backups are like seat belts: You don't think about them until you really, really need them.

Ask:

- When was the last time you tested a full restore?

- Are we using the right backup strategy? Off-site? Cloud? Hybrid?

You'd be shocked how many businesses think they're backed up...until they're not.

3. Are All Employees Following Security Best Practices?

It only takes one team member clicking the wrong link to bring the whole network down.

Ask:

- Have there been any unusual logins or risky behavior?
- Do we need another round of phishing training?
- Are employees using multifactor authentication?

Bonus points if your IT provider brings this

continued on page 2...

...continued from cover

up before you ask. That's how you know they're watching.

4. How Has Our Network Performance Been? Anything Slowing Us Down?

Slow systems = slow teams = lost productivity (and money).

Ask:

- Are there any recurring performance issues?
- Are we outgrowing our hardware or software?
- Is there anything we can optimize to speed things up?

Even small tweaks can make a big difference.

5. Are We Still Compliant With [HIPAA, PCI-DSS, GDPR, etc.]?

Regulations change. So do the rules about how you store and protect data.

Ask:

- Are we meeting the standards for our industry?
- Have any requirements changed?

- Do we need to update policies, software or training?

Fines for noncompliance aren't cheap. Stay ahead of them.

6. What Should We Be Budgeting For Next Quarter?

Good IT is proactive.

Ask:

- Are there any software licenses expiring?
- Any equipment nearing the end of its life?
- Any upcoming projects we should be planning for?

This helps you avoid surprise expenses and plan like a pro.

7. What Trends In IT Or Cybersecurity Are We Behind On That Are Making Us Slower Or More Vulnerable?

Technology doesn't stand still – and neither do cybercriminals.

Ask:

- Are there new tools or best practices we're not using yet?

- Are we lagging behind in any security protocols or performance benchmarks?
- What are other businesses our size doing that we're not?
- Are there any rising threats that we need to be more cautious of?

Falling behind on emerging trends doesn't just slow you down – it leaves you exposed. A great IT partner will keep you ahead of the curve, not playing catch-up.

You AREN'T Having These Conversations? Red Flag.

If your IT provider doesn't have clear answers to these questions – or worse, if they aren't offering to meet with you quarterly in the first place – you might not be getting the support you need.

Technology changes fast. Cyberthreats move faster.

You need someone who is not just reacting when something breaks but actively working to prevent the break in the first place.

CARTOON OF THE MONTH

"Unfortunately, not only have they stolen your identity, they're also living your best life."

YOUR VACATION AUTO-REPLY MIGHT BE A HACKER'S FAVORITE E-MAIL

You set it. You forget it. And just like that, while you're packing for vacation, your inbox starts broadcasting:

"I'm out of the office until [date]. For urgent matters, contact [coworker's name and e-mail]."

Harmless, right?

Actually, cybercriminals love these auto-replies. That simple message gives them valuable intel: your name, title, when you're unavailable, who to contact, internal team structure and sometimes even travel details.

This provides two major advantages:

Timing – They know you're unavailable and less likely to catch suspicious activity.

Targeting – They know who to impersonate and who to scam.

This sets the stage for a phishing or business e-mail compromise (BEC) attack.

How It Happens:

- Your auto-reply is sent.

- A hacker impersonates you or your alternate contact.
- They send an "urgent" request for money, passwords or documents.
- A coworker, trusting the e-mail, complies.
- You return to discover fraud or a breach.

Businesses with traveling executives or sales teams are especially vulnerable. Admins often field many requests, handle sensitive tasks quickly and may trust a well-crafted fake e-mail.

How To Protect Your Business:

1. Keep It Vague

Skip detailed itineraries. Instead, say: "I'm currently out of the office and will repond when I return. For immediate assistance, contact our main office at [info]."

2. Train Your Team

Educate staff never to act on urgent, sensitive requests based solely on e-mail. Always verify through another channel like a phone call.

SHINY NEW GADGET OF THE MONTH

EMBER SMART MUG 2

The Ember Mug 2 is a smart, temperature-controlled mug designed to keep your beverages at the perfect temperature. Available in 10 oz and 14 oz sizes, it maintains your chosen temperature for up to 1.5 hours (10 oz) or 80 minutes (14 oz) on a full charge, and all day when placed on its charging coaster. The mug connects to the Ember app, allowing you to set your preferred temperature between 120°F and 145°F, customize presets, and receive notifications. Its sleek design features a scratch-resistant coating and is IPX7 rated, making it safe for hand washing and submersion up to 1 meter.

3. Use E-mail Security Tools

Advanced filters, anti-spoofing protections and domain monitoring reduce impersonation risks.

4. Enable MFA Everywhere

Multifactor authentication across all accounts blocks hackers even if passwords are compromised.

5. Partner With A Proactive IT Provider

An experienced cybersecurity team can detect suspicious activity early and stop attacks before they cause serious damage.

THE HIDDEN COST OF WAITING

Why You Can't Afford To Delay Your Windows 10 Upgrade

If you're still running Windows 10 on your business machines, let's cut to the chase: The clock is ticking.

On October 14, 2025, Microsoft is officially ending support for Windows 10. That means no more security patches, no more bug fixes and no more technical support.

But here's what business owners really need to understand:

"We'll Deal With It Later" Is An Expensive Strategy

We get it – upgrading every machine in your business isn't exactly your idea of a fun budget item. It feels easy to delay...until something breaks.

But here's what procrastination actually costs:

1. You're Operating Without A Safety Net

Once Microsoft discontinues Windows 10

updates, every new vulnerability becomes your responsibility.

One breach could cost you thousands – or worse, your entire business.

2. Software And Hardware Compatibility Issues

Many business apps, such as accounting tools, CRMs and industry-specific platforms, are already phasing out support for Windows 10.

And it's not just software. New printers, peripherals and even security tools may stop playing nicely with your outdated OS.

3. You're Risking Compliance Violations

If your business handles sensitive data or is subject to regulations (HIPAA, PCI-DSS, etc.), using unsupported systems could result in fines or lawsuits.

What Smart Business Owners Are Doing Now

They're getting ahead of the deadline, not just by upgrading devices, but by using this transition to:

- Audit what devices need to go
- Streamline tools and software
- Tighten up cybersecurity protections
- Plan smarter for IT spend in 2025

Don't Wait Until October To Panic

Waiting until the last minute will cost you more – in money, stress and missed opportunity. We're helping small businesses make the upgrade the *smart* way: planned, smooth and optimized for future growth.

Book a **FREE** Network Assessment and we'll help you identify what needs upgrading, what can stay and how to build a transition plan that won't disrupt your business before the deadline.
